DETAILED ACTION

Allowable Subject Matter

The indicated allowability of claim 2 is withdrawn. Rejections based on the cited reference(s) follow.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to

Art Unit: 1744

consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over USP6,245,413 ('413).

Figure 1 shows a cleaning sheet which is adapted to be attached to a cleaning head (figure 7), the wiping portion (figure 1) having a plurality of tacky recesses open in the front and rear edges of the sheet and in the shape of triangles, the leading points of the triangles pointing inwardly from each edge. The patent does not show the configuration having recesses open to opposite directions and interconnected to each other in a configuration such that the interconnected recesses are impenetrable from the opposite direction.

In re Dailey, 357 F.2d 669, 149 USPQ 47 (CCPA 1966) (The court held that the configuration of the claimed disposable plastic nursing container was a matter of choice which a person of ordinary skill in the art would have found obvious absent persuasive evidence that the particular configuration of the claimed container was significant.). Accordingly, in the absence of evidence that the claimed recess geometries are significantly different from those taught in the '413 patent, they are considered to be an obious matter of choice to one skilled in the art.

Art Unit: 1744

Claim 1,4-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over USP 6,245,413 ('413) in view of US patent 6,550,092 (Brown et al.).

Figure 1 shows a cleaning sheet (1) which is adapted to be attached to a cleaning head (figure 7), the wiping portion (3)(figure 1) having a plurality of tacky recesses (17) formed in the wiping portion (3) and open in the front and rear edges of the sheet and in the shape of triangles, the leading points of the triangles pointing inwardly from each edge. The wiping portion is considered to read on the claimed "bulky member as defined in claims 9-13. The sheet also includes a base sheet or thin fixing portion (2) interposed between two wiping portions (3) resulting in a double sided reversible sheet (1) (see figure 2 and 3). The edges of the tacky recesses constitute a sloped portion, reading on claims 7,8,9, and 12.

The '413 patent discloses impregnating the sheet with an agent for adsorbing fine dust particles, but is silent as to a pressure sensitive adhesive (col. 6, lines 62-67).

The Brown et al. patent discloses a cleaning sheet having cavities in which a pressure sensitive adhesive is placed so as to aid the capture of dust particles (col. 4, lines51-64; col.5, lines 5-26). Accordingly, it would have been obvious to one skilled in the art to add a pressure sensitive adhesive to the recesses in the '413 patent in order to enhance the dust capturing capability as taught in the Brown et al. patent.

Art Unit: 1744

The '413 and Brown et al. patent are silent as to the geometries of the recesses defined in claim 14.

In re Dailey, 357 F.2d 669, 149 USPQ 47 (CCPA 1966) (The court held that the configuration of the claimed disposable plastic nursing container was a matter of choice which a person of ordinary skill in the art would have found obvious absent persuasive evidence that the particular configuration of the claimed container was significant.). Accordingly, in the absence of evidence that the claimed recess geometries are significantly different from those taught in the '413 patent, they are considered to be an obious matter of choice to one skilled in the art.

Applicant's arguments with respect to claims 1,2,4-14 have been considered but are most in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David A. Redding whose telephone number is 571-272-1276. The examiner can normally be reached on Mon.-Fri. 6:00 - 3:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gladys Corcoran-Piazza can be reached on 571-272-1224. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
